

Specialty Gas Equipment Catalogue

THE HARRIS PRODUCTS GROUP

A LINCOLN ELECTRIC COMPANY

The Harris Products Group was formed by combining two strong names in the welding business - Harris Calorific and J.W. Harris. The Harris Products Group is a world leader in metalworking products used in the brazing, soldering, welding, cutting and gas distribution industries. The combined company offers excellence in the manufacture of:

- Gas welding and cutting equipment
- Industrial and specialty gas regulation equipment
- Brazing and soldering alloys
- Welding alloys
- Pre-formed bends, rings and return bends

THE WELDING EXPERTS®

The Harris Products Group is a wholly-owned subsidiary of The Lincoln Electric Company. Lincoln has more than 63 manufacturing locations, including operations and joint ventures in 23 countries and a worldwide network of distributors and sales offices covering more than 160 countries.

SPECIALTY GAS EQUIPMENT

Harris Specialty Gas Equipment Division was founded to provide complete solutions to customer's special gas handling requirements. The breadth of the product line is used in analytical labs, chemical processing, research and development, as well as biotech and pharmaceuticals. Our products bring it all together – proven safety features, quality manufacturing processes, consistency in performance and the best overall value.

THE MERGER RESULTED FROM A SERIES OF

MANUFACTURING FACILITIES

Based in Mason, Ohio, The Harris Products Group has four manufacturing locations in six countries and a worldwide network of distributors and sales offices covering more than 90 countries. All Harris® manufacturing facilities are certified to ISO 9001 and ISO 14000 standards.

THE HARRIS PRODUCTS GROUP, a Lincoln Electric Company, is one of the largest independent manufacturers of pressure and flow control equipment in the world.

HARRIS® products are sold and used in over 90 countries. Harris Specialty Gas Equipment Division was founded to provide complete solutions to customer's special gas handling requirements. The breadth of the product line is used in analytical labs, chemical processing, research and development, as well as biotech and pharmaceuticals. In addition to pressure control equipment, HARRIS® offers complete gas management products for flow control, gas purification, cylinder storage and audio / visual pressure indication.

Quality

The Harris Products Group is certified to ISO 9001:2000. Quality is an integral part in all processes of the company from development, planning, design and manufacturing to sales and service activities. Our quality system is regularly audited on both an internal and external basis to ensure that consistent business processes are applied. Harris equipment is 100% tested, 100% of the time for both workmanship and performance.

All Harris Specialty Gases Equipment are assembled and tested in a cleanroom according to ISO7 standards.

High Purity Production

Regulators are designed to control pressure. Proper selection is critical for a safe and effective transfer of the gas from the gas supply to the instrument.

Gases can be supplied as compressed gas in high-pressure cylinders, low-pressure cryogenic cylinders or pipeline installations. The pressure from the supply source must be reduced to the desired working pressure for the application. To accomplish this, a pressure reducing valve (commonly referred to as a regulator) needs to be selected.

Regulators will not measure nor control flow. For that purpose, an external device such as a flowmeter or metering valve specifically designed for flow control should be used. Selection of the correct regulator involves many variables. All items must be considered in making the proper regulator selection.

How regulators work

Gas enters the inlet (high-pressure) chamber and its pressure is indicated on the inlet pressure gauge. When the pressure adjusting knob is turned counterclockwise and completely backed out to the stop, a valve and seat assembly located between the inlet chamber and the delivery (low pressure) chamber prevents gas from moving any further.

A filter located at the inlet to the valve and seat assembly, removes particulate matter from the gas stream to help protect the seat area. Turning the pressure-adjusting knob clockwise causes the adjusting screw to push against a spring button that compresses the pressure adjusting spring. The force of the compressed spring, in turn, causes the diaphragm to flex and push against the valve. This opens the regulator allowing gas to flow from the inlet chamber to the delivery chamber of the regulator.

Gas entering the delivery pressure chamber begins to build pressure and creates a counter-force (counter to the pressure adjusting spring) on the diaphragm. This pressure is indicated on the delivery pressure gauge attached to the delivery chamber.

When pressure builds sufficiently to counteract the spring tension, it pushes the diaphragm away from the poppet allowing the regulator valve to close. In this manner, pressure in the delivery chamber is controlled or regulated by the amount of spring tension placed on the diaphragm and is selectable by turning the pressure adjusting knob until desired pressure is indicated on the delivery pressure gauge.

When gas from the delivery pressure chamber is sent to the end process, the resulting decrease in gas volume in the delivery chamber causes a pressure reduction in the chamber. When this occurs, the spring tension again causes the diaphragm to push the valve open, allowing additional gas to enter the delivery chamber.

Pressure regulation, single-stage or two-stage design

All regulators are designed to reduce the inlet pressure to a desired working pressure. The regulator can reduce the pressure in either one step or two steps.

Single-stage regulator

A single-stage regulator reduces the pressure in one step. Single-stage regulators are best suited for applications where small pressure rise and manual periodic adjustment of the delivery pressure settings is not a problem. The inlet pressure remains constant, such as the case in gas withdrawal from liquid cylinders.

Two-stage regulator

A two-stage regulator reduces the pressure in two steps, either may be suitable for the application based on the desired pressure control. Two-stage regulators are two regulators built into a single regulator body. The first stage is not user adjustable with the pressure adjusting spring “pre-compressed” at the factory. The second stage then performs in a manner similar to that of a single-stage regulator, except that the inlet pressure to the second stage is relatively constant. The two-stage regulator allows for steady delivery pressure without periodic adjustment, well suited for applications requiring constant pressure from full to nearly empty cylinder.

Materials compatibility

Materials used to construct the pressure regulator need to be compatible with the intended gas service. All the wetted areas (parts of the regulator in contact with the gas) must be selected to avoid any reaction with the gas that can cause contamination in the gas stream or deterioration of the regulator components. Refer to Gas Materials Compatibility Table on pages 82-83.

All pressure regulators are available in stainless steel 316L and chrome plated brass versions.

■ Stainless steel 316L regulators

■ APPLICATIONS:

- For corrosive gases and high-purity applications, under request.
- Compatible with most gas types and low-velocity oxygen applications

■ FEATURES:

- Superior resistance
- Non-reactivity
- Exceptional durability and corrosive resistance (against acid sulfates and alkaline chlorides, sulfuric, hydrochloric, acetic, formic and tartaric acids etc.)
- High-surface finish properties

■ Chrome plated brass regulators

■ APPLICATIONS:

- For non-corrosive gases and mixture up to 6.0

■ FEATURES:

- Made of barstock
- Good strength
- Cost effective solution
- Smooth, resistant surface

Inlet Pressure Rating

Inlet pressures can range from low pressure in pipeline usage to high pressure from compressed gas cylinders. Regulators used in a pipeline will normally have only one gauge to indicate delivery pressure while a cylinder regulator will have two gauges; one to show inlet pressure and the other to show delivery pressure. An exception to this would be the use of regulators for liquid gas cylinders. In this application, only the delivery pressure gauge would be required since the supply pressure is generally constant. When selecting the regulator it must be capable of handling the incoming inlet pressure.

Delivery Pressure Range

The desired working pressure for the operation may range from low pressure (up to 2 bar) to a much higher working pressure (up to 200 bar). The regulator selected must be able to supply the proper working pressure consistent with the requirements of the process.

Gas Purity

Maintaining the purity level of the gas is of primary importance in the selection of the regulator. The selected regulator must be resistant to any introduction of contaminants that can be detrimental to the process. In addition to the proper selection of materials for gas compatibility, the design, assembly and testing of the regulator are critical items to consider in the selection process. Clean room assembly and helium leak testing are our common procedures used to ensure the integrity of the regulator.

HPI 300

High purity and high flow single-stage barstock cylinder regulator

Model HPI 300 is a cylinder manifold regulator available in chrome-plated brass (HPI 300C) or stainless steel (HPI 300S) barstock for gases up to 300 bar (4350 psig) inlet pressure.

APPLICATIONS:

- Non-corrosive high flow gas applications
- Research sample systems gases
- Petrochemical industry
- Process analyzer gases
- Emission monitoring systems

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999) and delivery pressures up to 35 bar (508 psig)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- HPI 300C - chrome-plated body, bonnet and fittings
- HPI 300S - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 6 ports flexible configuration, 3 high pressure and 3 low pressure
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 300 bar (4350 psig), except for Acetylene: max. 25 bar (362 psig)
- Cleaned for oxygen service

Model shown with additional accessories to be ordered separately

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig) For Acetylene: max. 25 bar (362 psig)
Outlet pressure	1,5/2/4/10/20 bar (21/29/58/145/290 psig) For Acetylene: max 1,5 bar (21 psig)
Flow capacity	Kv = 0,86 (Cv = 1,0)
Gauges	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock
Diaphragm	Hastelloy®*C276

HPI 600

High purity and high pressure single-stage cylinder regulator

The Model HPI 600 is a single-stage barstock high pressure regulator that is designed to deliver high outlet pressure when used on high pressure cylinders up to 300 bar (4350 psig). Regulator is available in chrome-plated brass (HPI 600C) or stainless steel (HPI 600S).

APPLICATIONS:

- High pressure gas applications
- High pressure testing
- Charging accumulators
- Pressurizing aircraft struts

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- HPI 600C - chrome-plated body, bonnet and fittings
- HPI 600S - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 6 ports flexible configuration, 3 high pressure and 3 low pressure
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 300 bar (4350 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig)
Outlet pressure	50/100/200 bar (725/1450/2900 psig)
Flow capacity	Kv = 0,129 (Cv = 0,15)
Gauges	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock

HP 701

High purity chrome-plated brass regulator

Model HP 701 is a chrome-plated single-stage cylinder regulator with a stainless steel diaphragm for general laboratory use. The HP 701 can be used when a slight pressure rise from full to empty cylinder can be tolerated.

APPLICATIONS:

- Non-corrosive gases
- Vacuum control
- Purging
- Pressure testing
- Blanketing

FEATURES:

- Recommended for gas purity up to grade 5.0 (99.999)
- Applicable for corrosive gases after prior confirmation of the material's compatibility
- 302L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- One-piece encapsulated seat design to protect seat from particulate contamination
- Chrome-plated bonnet, body and fittings
- 1×10^{-8} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Maximum inlet pressure 210 bar (3000 psig)

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 5.0
Inlet pressure	Max. 210 bar (3000 psig)
Outlet pressure	0-1/3, 5/8, 5/17 bar (15/50/125/250 psig)
Flow capacity	Kv = 0,1462 (Cv = 0,17)
Oxygen use	Suitable

MATERIALS:

Body	Chrome-plated brass
Bonnet	Chrome-plated die cast
Diaphragm	302 stainless steel
Nozzle	Brass
Seat	PTFE Teflon®*
Seals	PTFE Teflon®*
Filter	Nickel-plated sintered bronze - 10 micron
Seat	PH-17 stainless steel
Adjusting Knob	ABS plastic

HPI 721/741

High purity single-stage barstock regulator

Model HPI 721/741 is a single-stage cylinder regulator for applications where a slight rise in delivery pressure from full to empty cylinder can be tolerated.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Process analyzer gases
- Gas chromatography
- EPA protocol gases
- Laser gas systems
- Emission monitoring systems

Model shown (HPI-741-R-145-000-A)
with additional accessories to be ordered separately

FEATURES:

- Recommended for purity levels of grade 6.0 (99.9999) and higher
- Stainless steel version HPI 741 applicable for corrosive gases after prior confirmation of the material's compatibility*
- Hastelloy®** C276 diaphragm eliminates contamination from diffusion or outgassing
- One-piece encapsulated seat design includes a sintered filter to protect the seat from particulate contamination
- Brass chrome-plated bonnet barstock or 316L stainless steel as optional
- 316L stainless steel body for HPI 741, brass chrome-plated body for HPI 721
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 1/8" NPT thread on the bonnet venting for safety
- Maximum inlet pressure 300 bar (4350 psig)
- Safety relief valve as standard

TECHNICAL DATA:

Type	Single-stage cylinder regulator
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig) For Acetylene: max. 25 bar (362 psig)
Outlet pressure	1,5/2/4/10/20 bar (21/29/58/145/290 psig) For Acetylene: max. 1,5 bar (21 psig)
Flow capacity	$K_v = 0,0688$ ($C_v = 0,08$)
Gauges	49 mm dual scale (bar/psig) 316L stainless steel (HPI741) or chrome-plated brass (HPI 721)
Oxygen use	Suitable

HPI 722/742

High purity two-stage barstock regulator

Model HPI 742 is a regulator for cylinders where a constant delivery pressure from full to near empty is a required condition.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Process analyzer gases
- Gas chromatography
- EPA protocol gases
- Laser gas systems
- Emission monitoring systems

FEATURES:

- Recommended for purity levels of grade 6.0 (99.9999) and higher
- Stainless steel version HPI 742 applicable for corrosive gases after prior confirmation of the material's compatibility*
- Hastelloy®** C276 diaphragm eliminates contamination from diffusion or outgassing
- One-piece encapsulated seat design includes a sintered filter to protect the seat from particulate contamination
- Brass nickel-plated bonnet barstock or 316L stainless steel as optional
- 316L stainless steel body for HPI 742, brass nickel-plated body for HPI 722
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 1/8" NPT thread on the bonnet venting for safety
- Maximum inlet pressure 300 bar (4350 psig), except for Acetylene: max. 25 bar (362 psig)
- Safety relief valve as standard

TECHNICAL DATA:

Type	Two-stage cylinder regulator
Purity	6.0 and higher

HPI 723/743

High purity single-stage line regulator

Model HPI 743 is a stainless steel pipeline regulator for pipeline and other applications up to 300 bar (4360 psig) inlet pressure.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Process analyzer gases
- Gas chromatography
- Laser gas systems
- Emission monitoring systems

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility*
- Hastelloy[®] C276 diaphragm eliminates contamination from diffusion or outgassing
- Low wetted surface area
- HPI 723 - nickel-plated brass body, bonnet and fittings
- HPI 743 - 316L stainless steel body, nickel-plated brass bonnet and fittings (stainless steel bonnet is available upon request)
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 4 ports flexible configuration
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 300 bar (4360 psig), except for Acetylene: max. 25 bar (362 psig)
- Cleaned for oxygen service
- Safety relief valve as optional

Model shown HPI 743-145-000-A

TECHNICAL DATA:

Type	Single-stage
Purity	6.0 and higher
Inlet pressure	Max. 210 bar (3000 psig)
Outlet pressure	0-1/3, 5/8, 5/17/35 bar (15/50/125/250/500 psig)
Flow capacity	Kv = 0,0688 (Cv = 0,08)
Oxygen use	Suitable
Inlet/outlet ports	4 x 1/4" FNPT
Weight	2,01 kg

MATERIALS:

Body, bonnet	316L stainless steel barstock or nickel-plated brass barstock
Diaphragm (regulator)	Hastelloy [®] C276
Nozzle	316L stainless steel (HPI 743) Brass (HPI 723)
Seat	PCTFE
Seals	PTFE (Teflon [®]) for corrosive gases
Filter	SS 316L Micro Sintered
Adjusting Knob	ABS plastic

RELATED OPTIONS:

Wall mounting Bracket: P

HPI 300L

High purity and high flow single-stage barstock line regulator

Model HPI 300L is in-line manifold regulator available in chrome-plated brass (HPI 300LC) or stainless steel (HPI 300LS) barstock, for pipeline and other application up to 100 bar (1450 psig) inlet pressure.

APPLICATIONS:

- High flow gas applications
- High purity gas applications
- Bulk gas distribution systems
- Laser gas systems
- Process analyzer gases
- Research sample systems gases
- Petrochemical industry
- Emission monitoring systems

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999) and delivery pressures up to 50 bar (725 psig)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- HPI 300LC - chrome-plated body, bonnet and fittings
- HPI 300LS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 100 bar (1450 psig), except for Acetylene: max 25 bar (362 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 100 bar (1450 psig) For Acetylene: max. 25 bar (362 psig)
Outlet pressure	1,5/2/4/10/20/35/50 bar (21/29/58/145/290/507/725 psig) For Acetylene: max. 1,5 bar (21 psig)
Flow capacity	$K_v = 1,462$ ($C_v = 1,7$)
Gauge	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock
Diaphragm	Hastelloy® C276
Nozzle	316L stainless steel
Seat	PCTFE
Seals O-ring	Viton®** (FKM) Kalrez®*** (FFKM) for corrosive gases

HPI 600L

High purity and high pressure single-stage barstock line regulator

The Model HPI 600L is a single-stage high pressure line regulator that is designed to deliver high outlet pressures when used on high pressure cylinders up to 300 bar (4350 psig).

Regulator is available in chrome-plated brass (HPI 600LC) or stainless steel (HPI 600LS) barstock.

APPLICATIONS:

- High pressure gas applications
- High pressure testing
- Charging accumulators
- Pressurizing aircraft struts

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- HPI 600LC - chrome-plated body, bonnet and fittings
- HPI 600LS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 4 ports flexible configuration, one high pressure and three low pressure
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 300 bar (4350 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig)
Outlet pressure	50/100/200 bar (725/1450/2900 psig)
Flow capacity	Kv = 0,129 (Cv = 0,15)
Gauge	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock

HPI 400L

High purity and ultra-high flow single-stage barstock regulator

Model HPI 400L is a high flow in-line manifold regulator available in chrome-plated brass (HPI 400LC) or stainless steel (HPI 400LS) barstock for pipeline and other applications up to 40 bar (580 psig) inlet pressure.

APPLICATIONS:

- High flow gas applications
- Laser assist gases
- Pressure transfer
- Blanketing & high flow manifolds
- Bulk gas distribution systems
- Pharmacy industry
- Food industry
- Petrochemical industry

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999) and delivery pressures up to 20 bar (290 psig)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Low pressure and high flow regulator
- Nylon reinforced diaphragm
- HPI 400LC - chrome-plated body, bonnet and fittings
- HPI 400LS - 316L stainless steel body, bonnet and fittings
- 1×10^{-4} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 1/8" NPT thread on the bonnet venting for safety in 316L SS version
- Maximum inlet pressure 40 bar (290 psig), except for Acetylene: 25 bar (362 psig)
- Cleaned for oxygen service

Model shown with additional accessories to be ordered separately

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0

HPI 500L

High purity back pressure line regulator

Model HPI 500L is a line regulator available in chrome-plated brass (HPI 500LC) or stainless steel (HPI 500LS) barstock for protection pipeline against high pressure (function similar to relief valve).

APPLICATIONS:

- Line protection against high pressure
- Component testing
- Calibration systems
- Laboratory pressure control
- High pressure sampling systems
- Service & test equipment

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Available for air, nitrogen or hydrogen gas service
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- HPI 500LC - chrome-plated body, bonnet and fittings
- HPI 500LS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- 3 ports flexible configuration
- Maximum inlet pressure 80 bar (1160 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 80 bar (1160 psig)
Outlet pressure	2,5 – 10 bar (36 – 145 psig) 10 – 50 bar (145 – 725 psig) 50 – 80 bar (725 – 1160 psig)
Flow capacity	Kv = 0,086 (Cv = 0,10)

Gas Delivery Systems

When gases are used in significant volumes, a centralized gas delivery system is a practical necessity. A well-conceived delivery system will reduce operating costs, increase productivity and enhance safety.

A centralized system will allow the consolidation of all cylinders into one storage location. With all the cylinders in one place, inventory control will be streamlined and cylinder handling will be simplified and improved. Gases can be separated by type to enhance safety.

With gas delivery systems the frequency of cylinder changeouts are reduced. This reduction is achieved by connecting multiple cylinders to supply panels in banks in such a way that one bank can be safely vented, replenished and purged while a second bank provides continuous gas service. This type of system can supply gas to multiple applications and even entire facilities, eliminating the need for separate cylinders and regulators for each point of use.

Since cylinder switchover can be accomplished automatically by the supply panel, cylinders in a bank will be uniformly exhausted, resulting in improved gas utilization and lower costs. The integrity of the delivery system will be better protected since cylinder change-outs will be done in an isolated, controlled environment.

Purity

The level of gas purity required at each point of use is extremely important in designing a gas delivery system. Maintaining the gas purity is simplified with a centralized system as described above. Selection of materials for construction should be consistent throughout. For example, if a research grade gas is being utilized, all stainless steel construction and diaphragm packless shut-off valves should be used to eliminate contamination of the gas stream.

In general, three levels of purity are sufficient to describe nearly any application. The first level, usually described as a multi-purpose applications, has the least stringent purity requirement. Typical applications may include welding, cutting, laser assist, atomic absorption or ICP mass spectrometry. Gas supply panels for multipurpose applications are economically designed for safety and convenience. Acceptable materials for construction include brass, copper, Teflon®, Tefzel® and Viton®. Packed valves, such as needle valves and ball valves, are often used for flow shut-off. Gas distribution systems manufactured to this level should not be used with high purity or ultra-high purity gases.

The second level, called high-purity applications, requires a higher level of protection against contamination. Applications include laser resonator gases or chromatography where capillary columns are used and system integrity is important. Materials of construction are similar to multi-purpose manifolds, except flow shut-off valves are diaphragm packless to prevent diffusion of contaminants into the gas stream.

The third level is referred to as ultra-high purity applications. This level requires the highest level of purity for components in a gas delivery system. Trace measurement in gas chromatography is an example of an ultra-high purity application. Wetted materials for manifolds at this level must be selected to minimize trace components adsorption. These materials include 316L stainless steel, Teflon®, Tefzel® and Viton®*. All tubing should be 316SS cleaned and passivated. Flow shut-off valves must be diaphragm packless. It is particularly important to recognize that components that are suitable for multi-purpose applications may adversely affect results in high or ultra-high purity applications. For example, out-gassing from neoprene diaphragms in regulators can cause excessive baseline drift and unresolved peaks.

*Teflon®, Viton® and Tefzel® are registered trademarks of The Chemours Company

Types of Gas Delivery Systems

SINGLE STATION SYSTEMS

In some applications, a gas is used only to calibrate instrumentation. For example, a continuous emissions monitoring system (CEMS) may only require calibration gases to flow for a few minutes each day. Such an application clearly does not require a large-scale automatic changeover manifold. However, the delivery system should be designed to protect against contamination of the calibration gas and to minimize costs associated with cylinder change-outs.

A single station supply panel with bracket is an ideal solution for this type of application. It provides a safe and cost-effective means of connecting and changing out cylinders by eliminating the need to struggle with the regulator. When the gas includes corrosive components such as HCl or NO, a purge assembly should be incorporated into the manifold to allow the regulator to be purged with an inert gas (usually nitrogen) to protect it from corrosion. The single station panel can also be equipped with a second pigtail. This arrangement allows an additional cylinder to be connected and held in reserve. Switchover is accomplished manually using the cylinder shut-off valves. This configuration is usually desirable with calibration gases since the precise mix of components generally varies somewhat from cylinder to cylinder. A cylinder change may require resetting the instrument.

SEMI-AUTOMATIC SWITCHOVER SYSTEMS

Many applications require continuous use and/or larger volumes of gases beyond what is practical for a single station manifold. Any pause in the gas supply results in lost or ruined experiments, a loss of productivity and even downtime for an entire facility. Semi-automatic switchover systems provide the capability to switch from a primary to a reserve cylinder or bank without interrupting the gas supply, thus minimizing costly downtime. Once the primary cylinder or bank is depleted, the system automatically switches to the reserve cylinder or bank for continuous gas flow. The user then changes the empty cylinders for new cylinders, while the gas is still flowing from the reserve side. A bi-directional valve is used to indicate the primary or reserve side during cylinder change-out.

FULLY AUTOMATIC PROGRAMMABLE SWITCHOVER SYSTEMS

In some critical manufacturing and laboratory processes, an uninterrupted gas supply is an absolute necessity. Failure of the gas supply in these facilities can result in loss of an entire laboratory's in-process experiments or even shutdown of manufacturing production line or process. The potential cost of either of these events is so high that the installation of a gas delivery system, designed to provide an uninterrupted gas supply, is clearly justified. A fully automatic programmable switchover system is generally selected for these applications.

HPI 100P

High purity one-sided supply panel

The HPI 100P is a high purity gas supply panel. Manual adjustment of the regulator allow the user to set downstream pressure. The system includes purge function. Designed for applications where a slight rise in delivery pressure from full to empty cylinder can be tolerated or as first stage of pressure reduction.

APPLICATIONS:

- Laboratory pressure control
- Research sample systems gases
- Component testing
- Petrochemical industry
- Emission monitoring systems
- Controlled atmosphere
- Service & test equipment

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Wall mounting panel and brackets included
- Ready to install wall mounting panel
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Purge function and diaphragm shut-off valves for the best results
- Possible to connect 2 gas cylinders or gas cylinder and a gas for purging operation
- HPI 100PC - chrome-plated body, bonnet and fittings
- HPI 100PS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Inlet / outlet - 1/4" FNPT
- Maximum inlet pressure 300 bar (4350 psig), except for Acetylene: max. 25 bar (362 psig)
- External relief valve standard
- Cleaned for oxygen service

TECHNICAL DATA:

Panel type	One-sided

HPI 300P

High purity semi-automatic switchover supply panel

The HPI 300P is a semi-automatic high purity switchover panel which prevents downtime by automatically switching gas supply from the primary cylinder bank to the reserve cylinder. The user resets the primary bank by turning the knob. Outlet pressure is factory pre-set.

APPLICATIONS:

- Laboratory pressure control
- Research sample systems gases
- Component testing
- Petrochemical industry
- Emission monitoring systems
- Controlled atmosphere
- Service & test equipment

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Wall mounting panel and brackets included
- Ready to install wall mounting panel
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Purge function and diaphragm shut-off valves for the best results
- Possible to connect 2 gas cylinders or gas cylinder and a gas for purging operation
- HPI 300PC - chrome-plated body, bonnet and fittings
- HPI 300PS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Inlet / outlet - 1/4" FNPT
- Maximum inlet pressure 300 bar (4350 psig), except for Acetylene: max. 25 bar (362 psig)
- External relief valve standard
- Cleaned for oxygen service

TECHNICAL DATA:

Panel type	Semi-automatic switchover supply panel
Regulator type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig) For Acetylene: max 25 bar (362 psig)
Outlet pressure	1,5/2/4/10/20 bar (21/29/58/145/290 psig) For Acetylene: max 1,5 bar (21 psig)
Purge function	Yes
Gauge	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock
Diaphragm (regulator)	Hastelloy®*C276
Diaphragm (valve)	Elgiloy®**
Nozzle	316L stainless steel
Seat	PCTFE
Seals O-ring	Viton®*** (FKM) Kalrez®**** (FFKM) for corrosive gases
Filter	SS 316L Micro Sintered
Adjusting Knob	Aluminium

HPI 800P

High purity semi-automatic switchover supply panel

The HPI 800P is a semi-automatic high purity switchover panel which prevents downtime by automatically switching gas supply from the primary cylinder bank to the reserve cylinder. The user resets the primary bank by turning the knob. Outlet pressure is factory pre-set.

Model shown with additional accessories to be ordered separately

APPLICATIONS:

- Laboratory pressure control
- Research sample systems gases
- Component testing
- Petrochemical industry
- Emission monitoring systems
- Controlled atmosphere
- Service & test equipment

FEATURES:

- Recommended for non-corrosive gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Wall mounting panel and brackets included
- Ready to install wall mounting panel
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Purge function and diaphragm shut-off valves for the best results
- Possible to connect 2 gas cylinders or gas cylinder and a gas for purging operation

HPI 130P

High purity one-sided supply panel with two-stage regulator

The HPI 130P is a high purity two-stage gas supply panel available in chrome-plated brass (HPI 130PC) or stainless steel (HPI 130PS) barstock. Manual adjustment of the regulator allow the user to set downstream pressure. The system includes purge function. Designed for constant delivery pressure from full to near empty cylinder conditions.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Gas chromatography
- Calibration gas
- Process analyzer gases
- Emission monitoring systems
- Laser applications

Model shown with additional accessories to be ordered separately

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Wall mounting panel and brackets included

SG 905 SS

High purity single regulator mounting station

The SG 905 SS semi-automatic high purity switchover prevents downtime by automatically switching gas supply from the primary cylinder bank to the reserve cylinder bank. The user resets the primary bank by turning the knob. Manual adjustment of the individual regulators is not required.

All systems include a line control regulator.

APPLICATIONS:

- Semi-automatic switchover

FEATURES:

- Wall mounting panel and brackets included
- Maximum inlet pressure 210 bar 3000 psig
- Delivery pressure: 0-125 psig; except acetylene 0-15 psig
- Inlet / outlet - 1/4" NPT
- Headers include diaphragm-type shut-off valves
- All systems include stainless steel pigtailed with check valves and stainless steel inner core
- Acetylene includes dry-type flash arrestors on pigtail end
- All pigtailed have protective armour casing for added safety

Model shown with additional accessories to be ordered separately

SPECIALTY GAS / LASER GAS

The Harris Products Group is a quality manufacturer of high purity, ultrahigh purity and laser gas distribution systems. Our state-of-the-art manufacturing and engineering designed components ensure gas integrity from source to point-of-use for laboratory, research, analytical and high purity laser gas applications.

GAS PRESSURE CONTROL
PANELS

FOR GAS CHROMATOGRAPHY

POINT OF USE SYSTEMS

BACK-UP SYSTEM

FOR GAS
GENERATORS

GAS SUPPLY PANELS

FOR LASER
APPLICATIONS

HPI 100PB

High purity generator back-up panel

Model HPI 100PB provides a continuous backup supply of gas in case of generator failure or loss of power. The system automatically switches to a backup cylinder of gas when the generator supply pressure drops below a preset value. The process will automatically reverse when the gas supplied by the generator returns to a normal level.

APPLICATIONS:

- Back-up for gas generator
- Laboratory pressure control
- Research sample systems gases

FEATURES:

- Ready to install wall mounting panel
- Wall mounting panel and brackets included
- Includes 1000 mm flexible pigtail
- 1/4 turn isolation shut off valves included
- 1/4" FNPT outlet connection
- 1/4" FNPT inlet connection with reverse flow check valve
- Inlet / outlet tube fittings on request
- Maximum inlet pressure 300 bar (4350 psig), except for Acetylene: max. 25 bar (362 psig)
- Recommended for air, nitrogen or hydrogen gas service

Option B

Model shown with additional accessories to be ordered separately

TECHNICAL DATA:

Regulator type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig) For Acetylene: max 25 bar (362 psig)
Outlet pressure	10 bar (145 psig) For Acetylene: 1,5 bar (21 psig)
Flow capacity	Kv = 0,0688 (Cv = 0,08)
Purge function	Yes
Gauge	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	Chrome-plated brass barstock
Diaphragm (regulator)	Hastelloy®**C276

HPI 100TP

High purity wall mounted point of use

Model HPI 100TP is a wall mounted point of use regulator available in chrome-plated brass (HPI 100TPC) or stainless steel (HPI 100TPS) barstock.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Gas chromatography
- Calibration gas
- Process analyzer gases

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Wall mounting panel and brackets included
- Ready to install wall mounting panel
- Based on HPI 100L regulator
- 3 inlet port available configuration – top as a standard
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Diaphragm inlet shut-off valves
- Modular design
- HPI 100TPC - chrome-plated body, bonnet and fittings
- HPI 100TPS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Inlet / outlet - 1/4" FNPT
- Maximum inlet pressure 40 bar (580 psig) except for Acetylene: max. 25 bar (362 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Regulator type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 40 bar (580 psig) For Acetylene: 25 bar (362 psig)
Outlet pressure	1,5/2/4/10 bar (21/29/58/145 psig) 20 bar (290 psig) on request For Acetylene: max. 1,5 bar (21 psig)
Flow capacity	Kv = 0,0602 (Cv = 0,07)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock

HPI 100TPC 145 000 E A N₂

HPI 101TP

High purity wall mounted point of use slim version

Model HPI 101TP is a wall mounted point of use regulator available in chrome-plated brass (HPI 101TPC) or stainless steel (HPI 101TPS) barstock.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Gas chromatography
- Calibration gas
- Process analyzer gases

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Wall mounting panel and brackets included
- Ready to install wall mounting panel, modular design
- Ergonomic, slim design
- 1 inlet port available configuration – top as a standard
- 3 outlet port possible configuration – on request
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Diaphragm inlet and outlet shut-off valves
- HPI 101TPC - chrome-plated body, bonnet and fittings
- HPI 101TPS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Inlet / outlet - 1/4" FNPT
- Maximum inlet pressure 40 bar (580 psig), except for Acetylene: 25 bar (362 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Regulator type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 40 bar (580 psig) For Acetylene: 25 bar (362 psig)
Outlet pressure	1,5/2/4/10 bar (21/29/58/145 psig) 20 bar (290 psig) upon request For Acetylene: max. 1,5 bar (21 psig)
Flow capacity	Kv = 0,0602 (Cv = 0,07)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock
Diaphragm (regulator)	Hastelloy®*C276
Diaphragm (valve)	Hastelloy®*C276
Nozzle	316L stainless steel
Seat	PCTFE
Seals O-ring	Viton®** (FKM) Kalrez®*** (FFKM) for corrosive gases
Filter	SS 316L Micro Sintered
Adjusting Knob	ABS plastic

HPI 300TP**High purity bench mounted point of use**

Model HPI 300TP is a bench mounted point of use regulator available in chrome-plated brass (HPI 300TPC) or stainless steel (HPI 300TPS) barstock.

APPLICATIONS:

- High purity gas applications
- Research sample systems gases
- Gas chromatography
- Calibration gas
- Process analyzer gases

FEATURES:

- Recommended gases purity levels up to grade 6.0 (99.9999)
- Stainless steel version applicable also for corrosive gases after prior confirmation of the material's compatibility
- Ready to install bench mounting panel, modular design
- 1 inlet port configuration - bottom
- 1 outlet port configuration - bottom
- 316L stainless steel diaphragm eliminates contamination from diffusion or outgassing
- Diaphragm inlet shut-off valves
- HPI 300TPC - chrome-plated body, bonnet and fittings
- HPI 300TPS - 316L stainless steel body, bonnet and fittings
- 1×10^{-9} mbar l/s He inboard helium leak rate to maintain gas purity levels
- Inlet / outlet - 1/4" FNPT
- Maximum inlet pressure 60 bar (870 psig), except for Acetylene: max. 25 bar (362 psig)
- Cleaned for oxygen service

TECHNICAL DATA:

Regulator type	Single-stage
Purity	Up to 6.0
Inlet pressure	Max. 60 bar (870 psig) For Acetylene: max. 25 bar (362 psig)
Outlet pressure	1,5/2/4/10 bar (21/29/58/145 psig) 20 bar (290 psig) upon request For Acetylene: max. 25 bar (362 psig)
Flow capacity	Kv = 1,032 (Cv = 0,12)
Gauge	49mm dual scale (bar/psig)
Oxygen use	Suitable

MATERIALS:

Body, bonnet	316L stainless steel barstock or chrome-plated brass barstock
Diaphragm (regulator)	Hastelloy®*C276
Diaphragm (valve)	Hastelloy®*C276
Nozzle	316L stainless steel
Seat	PCTFE
Seals O-ring	Viton®** (FKM) Kalrez®*** (FFKM) for corrosive gases

Extensions

HPI E

High purity extensions

FEATURES:

- Max. inlet pressure 300 bar
- Pipe material stainless steel 316L (1.4404)
- Modular design
- Diaphragm inlet shut off valve option
- Easy to install
- Made of 316L stainless steel for corrosive gases
- Made of chrome-plated brass for non-corrosive gases and mixture up to 6.0

APPLICATIONS:

- To increase the number of connected cylinders to supply panel

TECHNICAL DATA:

Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig)
O-ring	Viton®* (FKM)

Valves

HPI DV300

High purity, high pressure diaphragm valve

FEATURES:

- Regulators shutoff valves / instrument valves
- Max. inlet pressure 300 bar (4350 psig)
- Very high sealing capacity
- Metal to metal sealing to atmosphere
- Made of 316L stainless steel for corrosive gases
- Made of chrome-plated brass for non-corrosive gases and mixture up to 6.0
- DV300K (knob version) - 1/2 turn
- DV300L (lever version) - 1/4 turn

TECHNICAL DATA:

Purity	Up to 6.0
Inlet pressure	Max. 300 bar (4350 psig)
Inlet/outlet connection	1/4 FNPT x 1/4 FNPT and 1/4 MNPT x 1/4 FNPT
Oxygen use	Suitable

MATERIAL SPECIFICATIONS:

Seal	Kel-F (CTFE)
Seal	Metal to metal SS 316L Stainless Steel
Leak rate	$2,0 \times 10^{-8}$ mbar l/s He
Flow capacity	$C_v = 0,13$

Flexible hoses

HPI FH

Flexible hoses for connecting gas supply panels and gas cylinder

FEATURES:

- HPI FH S hose made of stainless steel 316L / 304
- HPI FH T hose made of PTFE + stainless steel 304
- Special requirements on request
- The hose is made of stainless steel 316L or PTFE inside, a stainless steel 304 double braid and end needed connections
- All hoses are equipped with stainless steel safety cable
- Inner diameter 6 mm
- Elbow connection on cylinder side

Check valves

HPI CV L Check valve

FEATURES:

- The HPI CV L is a compact design for laboratory pipeline system
- Valve is closed
- When differential pressure between inlet and outlet is higher than the set pressure of the spring, the loaded poppet will move backwards and will enable a free passage of flow through the valve
- Inlet and outlet connection is 1/4" tube fitting

MATERIAL SPECIFICATIONS:

O-ring	Viton®* (FKM)
Materials body	SS 316L
Pressure rating	200 bar
Cracking pressure	0,02 bar

Relief valves

HPI SRV Relief valves

These relief valves may be used as an integral part of a pressure regulator or panel. The relief valves have a 1/4" NPT inlet and outlet thread to vent gases either externally or remotely.

FEATURES:

- The HPI RVP is a relief valve for low working pressure.
- The valve is normally closed.
- Every RVP Relief Valve is factory tested for proper set and resealing performance.

MATERIAL SPECIFICATIONS:

O-ring	Viton®* (FKM)
Materials body	SS 316L or nickel-plated brass
Inlet connection	1/4" NPT (M)
Outlet connection	1/4" NPT (F)
Open pressure	Up to 50 bar ¹

Pressure Gauges

PG

DESCRIPTION:

- Pressure gauges are designed for general and laboratory applications involving the measurement of compressed gases compatible with the materials of construction.
- Gauges are used to monitor pressure of regulators, points of use, supply boards.
- Radial (6 o'clock) mount PG R
- Centre back mount PG B

MATERIAL SPECIFICATIONS:

Type	Bourdon tube pressure gauge
Diameter	49 mm
Pressure	Many pressure ranges available From 2 bar up to 400 bar
Mounting connections	Radial mount Centre back mount
Connection	¼" NPT male
Corpus material	Chrome-plated brass or stainless steel
Accuracy	Class 2,5

PG R

PG B

Models shown with additional accessories to be ordered separately

Inductive contact version on request.

Alarm system

HAS

DESCRIPTION:

- Alarm box is used for monitoring low supply pressure gas source and inform user visually by LED light and acoustically by loud buzzer.
- Temporarily silent snoozer for the buzzer
- Extra connection for external alarm
- Activated by external contact gauges
- Three version available 2, 6, 10 possible contact connection
- Readable LED light display
- 230V AC, 50 Hz; 110V AC, 60 Hz power supply (on request)

ORDERING INFORMATION:

4302085	HAS1, 1 connection
4302086	HAS2, 2 connections
4302087	HAS4 4 connections
4302088	HAS6, 6 connections
4302089	HAS10, 10 connections

Contact gauges

PRODUCT FEATURES:

- Contact pressure gauges with digital signal
- Set point adjustable over 10-90% of scale
- Double scale bar / psig
- c/w 2 meters of cable

TECHNICAL FEATURES:

Body material	316L
Workin Voltage	180/VDC/130/VDC
Max. Voltage	200VDC
Max ON/OFF amperage	0.5A
Contact Power	10 Watt
Contact Current (initial)	150 mΩ
Contact Capacitance	0.2pF
Insulation Resistance	10 ¹² Ω
Active Time	0.6msec (Max)
Release Time	0.2 msec (Max)
Frequency	5.2kHz
Working Temperature	-40°C ~ 125°C
Nominal Diameter	63 mm
Connection	1/4" NPT (M)(bottom)
Lenght of cable	2 meters
Scale	bar/psig
Window	Laminated safety glass
Switching Accuracy	+/- 2.5% full scale
Weight	

DIMENSIONS:

ORDERING INFORMATION:

9017491	Contact Gauge LP-NO-025 (0-25 bar, 0-362 psig)
9017639	Contact Gauge LP-NO-060 (0-60 bar, 0-870 psig)
9017640	Contact Gauge HP-NO-250 (0-250 bar, 0-3625 psi)
9017492	Contact Gauge HP-NO-400 (0-400 bar, 0-5800 psi)

* Working pressure above 250 bar in Europe and 182 bar in the USA

** Flammable according to ISO 5145, for inert No. 4 can be used when FTSC codes fit with the mixture

MATERIALS COMPATIBILITY

The compatibility data shown on the following pages has been compiled to assist in evaluating the appropriate materials to use in handling various gases. Prepared for use with the dry (anhydrous) gases at normal operating temperature of 70° (21° C), information may vary if different operating conditions exist.

DIRECTIONS:

Locate the gas you are using in the first column.

Compare the materials of construction for the equipment you intend to use with the materials of construction shown in the Compatibility Chart. Then use the Key to Materials Compatibility to determine the compatibility.

- Satisfactory for use with the intended gas
- U** Unsatisfactory for use with the intended gas
- I** Insufficient data available to determine compatibility with the intended gas
- R1** Satisfactory with brass having a low copper content
- R2** Satisfactory with acetylene, however, cylinder gas is dissolved in a solvent (generally acetone) which may be incompatible with these elastomers

- R3** Satisfactory with brass, except where acetylene or acetylides are present
- R4** Generally unsatisfactory, except where specific use conditions have proven acceptable
- R5** Satisfactory below 3000 PSIG (206.9 bar) where gas velocities do not exceed 30 ft./sec (9.14 m/s).
- R6** Compatibility depends on condition of use

Certificate

Standard **ISO 9001:2015**

Certificate Registr. No. **01 100 1332014**

Certificate Holder: **Harris Calorific International
Sp. z o.o.**
ul. Strefowa 8
58-200 Dzierżonów
Poland

Scope: Design and development, production, sale, marketing and service of pressure regulators and flowmeters of industrial gases as well as torches and accessories for gas cutting, welding, brazing and heating.

Proof has been furnished by means of an audit that the requirements of ISO 9001:2015 are met.

Validity: The certificate is valid from 2024-12-22 until 2027-12-21.
First certification 2012

Warranty

This equipment is sold by The Harris Products Group under the warranties and policies set forth in the following paragraphs. The warranty is extended only with respect to the purchase of this equipment directly from The Harris Products Group or its authorized distributor network as new merchandise and is extended to the first buyer thereof other than for the purpose of resale.

Unless stated otherwise, the warranty period is three (3) years from the date of original delivery to the buyer with the following exception for equipment use in corrosive gas service. Equipment used in corrosive gas service will have a warranty of ninety (90) days from the date of original delivery. For accessories the warranty period is one (1) year from the date of original delivery. The equipment is warranted to be free from functional defects in materials and workmanship and to conform to the description of this equipment contained in the product manual and any associated labels, inserts or instructions provided that the equipment is properly operated under conditions of normal use and that recommended regular maintenance and service is performed in accordance with the instructions provided.

The warranty for such equipment shall not apply if the equipment has been altered by any third party. The Harris Products Group or its designated service facility shall only perform repairs to the equipment. If the equipment has been subject to abuse, misuse, negligence or accident the stated warranty will not apply.

The Harris Products Group sole obligation to the buyer and the buyer's sole remedy is limited to the repair or replacement of the equipment free of charge at The Harris Products Group's option. The authorized distributor from which it was purchased must report the request for return or repair to The Harris Products Group. The request must include the observed deficiency, the part number or assembly number, gas service used and the proof of purchase. The request for return or repair must occur no later than seven (7) days after the expiration of the warranty period (Three years and seven days for non-corrosive equipment and ninety seven (97) days for equipment in corrosive gas service). Transportation charges are to be prepaid for the return of the equipment and upon examination the equipment is found defective due to no fault of the buyer the equipment will be replaced or repaired and returned to the original buyer at no charge. If the product is found to be defective due to negligence of the buyer or his customer the product will be repaired or replaced and returned to the original buyer only after authorization has been received to pay for any such repairs and all transportation charges.

The Harris Products Group shall not be liable for any damages including but not limited to incidental damages, consequential damages or other damages which may occur due to negligence, breach of warranty or otherwise.

There are no expresses or implied warranties that extend beyond the warranties set forth by The Harris Products Group.
